

When should you plant Bareroot Seedlings rather than Containerized Seedlings or vice versa?

ArborGen provides both containerized and bareroot seedlings for reforestation, and there are benefits to using both. But which stock type you choose is really based on what's best for your land and what you want at harvest.

Initial survival is essential, but there's much beyond that consideration when designing a thriving, strong stand of trees—one with increased growth, better straightness, rust resistance, and reduced forking. The genetics of the seedlings you plant can directly determine the return on your investment – not the stock type.

You may be paying more for the container than what's inside.

WHY BAREROOT?

- Reforestation projects with bareroot are a cost-efficient tool with expected survival rates of around 88%.*
- Ideal on well prepared, non-stressful sites – promotes successful regeneration.
- Freight costs are less.
- Large-scale projects can be more economical with bareroot seedlings.
- Containers can cost up to \$50 more per acre to plant than bareroot.

WHY CONTAINERIZED?

- Container seedlings can provide some survival insurance, but at a cost.
- Great for stressful sites with a rocky, gravelly component.
- Helpful for early or late planting.
- On average, containers deliver 7% to 10% better survival.*

**Ask your Reforestation Advisor for complete data*

And remember, proper site prep prevents poor performance – every time.

Planting containerized seedlings is not a substitute for proper quality site preparation or poor genetics. Landowners should refrain from buying containerized seedlings only to skimp on-site preparation, thinking that the containerized seedlings will compensate for poor or no site prep.

Survival gets you Trees.....Genetics brings the Value

(Both stands below had 90% Survival)

10 Yr. Old **Container 2nd gen** stand in SC: high number of defective trees: crooks, forks, rust galls
35% SawTimber Potential

11 Yr. Old **Bareroot MCP Elite** Stand in AL:
90% Sawtimber Potential
3x the Value of the OP Container Stand

Just because it's in a container, doesn't mean the

planting.

Webinar Announcement

HOW TO FIND MONEY
ON YOUR FOREST LAND

WEBINAR

April 19th
12:30 pm EDT
11:30 am CDT

with Dr. Paul Jeffreys

Is there money you could be earning from your forest land that you're leaving on the table?

Join Dr. Paul Jeffreys on a live webinar where he'll discuss the following areas and get your questions answered:

- Which seedlings will give you the most bang for your buck
- How to find out what planting scenarios will give you the best options at harvest
- The difference between common seedling types
